***This course includes chapter-wise MCQs & a Final Assessment**

Introduction

Most trading and investment professionals rely on their common knowledge of securities to make their trading and investment decisions. But the fact is that every security is traded or invested in, in a different way. That's where our Basic and Advanced Derivatives bundle course can help you. With this course, you will learn to differentiate between different securities in question, including swaps, futures, forwards, etc. When you understand this differentiation, it becomes easier to explore the mechanism involved. Hence, trading or investment yourself or recommending better deals to clients as an analyst becomes easier.

Every chapter that you go through is followed by a set of MCQs, which you can solve and check how thoroughly you have learned and absorbed the lesson. As soon as you complete the entire module, you get access to the final assessment, clearing which will earn you a certificate from our end. This certificate recognizes your worth as a learner and as a would-be professional in the field of derivatives.
